14. Write the python program to implement Alpha & Beta pruning algorithm for gaming

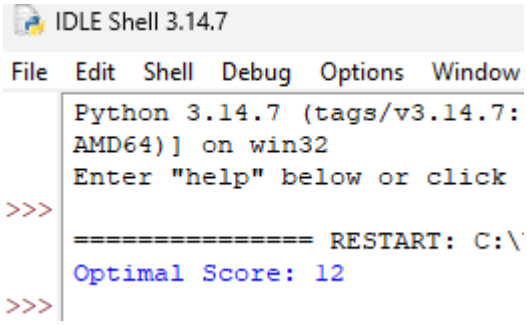

Aim: To implement the Alpha-Beta Pruning algorithm to optimize the Minimax search process.

Procedure:

1. Define the game tree and its terminal scores.
2. Initialize alpha to negative infinity and beta to positive infinity.
3. Explore the game tree recursively.
4. Maximize the score at maximizing nodes.
5. Minimize the score at minimizing nodes and prune unnecessary branches when alpha is greater than or equal to beta.
6. Display the optimal score.

Output:

Result: Thus, Alpha-Beta Pruning was implemented successfully to find the optimal score while avoiding unnecessary searches.
